## SUMMARY

---

Frontend and Webflow developer with leadership experience. Strong in Webflow, custom JavaScript, and building scalable site architectures. Experienced collaborating across design and backend teams to deliver reliable, performant web experiences.

## EXPERIENCE

---

### *SPH Engineering, **Webflow Developer***

*Jan 2026 - Present*

Develop and maintain Webflow websites

Manage operational tasks

Implement custom JS solutions, project architecture, CMS systems, automations

### *Foursets, **Webflow Developer / Team Lead***

*Dec 2024 - Jan 2026*

I focus primarily on advanced website development in Webflow, building scalable and highly customized solutions.

I work closely with designers and managers to transform complex UI/UX concepts into fully functional Webflow projects.

In addition to Webflow development, I implement advanced custom logic in JavaScript, including API Integrations, interactive quiz forms, dynamic calculators, and other client-side features.

My responsibilities include:

Developing complex Webflow projects with custom CMS structures and dynamic content;

Creating multi-step forms, quiz funnels, and calculation tools using JavaScript;

Integrating third-party services and APIs;

Implementing custom business logic and automation workflows;

Connecting external services for data processing, analytics, and AI-powered features.

### *Xmethod, **Frontend Developer***

*Oct 2022 - Dec 2024*

Developed websites using HTML/CSS/JS: landing pages, online stores, corporate websites

Collaborated closely with designers and marketers

### *kt.team, **Webflow Developer***

*Jun 2021 - Oct 2022*

Built websites and services on Webflow

Worked with backend developers and designers

Implemented custom JS logic for large-scale projects

Key functionalities:

User dashboards, registration, login and authorization

Dashboard and service-specific settings

Core service logic: API integration, chat implementation, data caching, AI integration

## SKILLS

---

HTML/CSS (SASS/SCSS) • Webflow • Responsive cross-browser layout • CMS collections • Creating and customizing components • Integrations with third-party services • Custom JS logic and animations • Automations (Zapier, Make, n8n, Google App Scripts) • JavaScript • Rest API
